Navigational Help

To find information on the MERL CD-ROM, it is helpful to understand the file structure of the CD-ROM. It is also helpful to understand how specific bookmarks and hyperlinks provide transportation between navigational files and document files.

File Structure

The DOCS folder contains all of the navigational pages and documents on the MERL CD-ROM. The graphic below represents file structure on the DOCS folder.

How to access documents on the MERL CD-ROM

From the Home page, you can link to navigational files for each documentation suite. When you click a document title in one of these navigational files, the corresponding document file opens.

Bookmarks provide links from open document files to navigational files. Click on the HOME/HELP bookmark in a document file to open the Home page. Click on the LIST OF BOOKS bookmark in a document file to open the related navigational file for that documentation suite. If you do not know what a bookmark is, see [Bookmarks](#).

If you have difficulty finding a particular document in a navigational file, conduct an Acrobat Reader Search on part or all of its title.

How to access information in a document

On the MERL CD-ROM, some PDF files contain one complete document while others contain only a part of a document. For example, many Meridian 1 PDF files contain chapters instead of complete documents.

If a PDF file contains a complete document, use bookmarks to locate sections or chapters in that document.

If a PDF file contains only part of a document, click text on any contents page to open the file which contains the corresponding document section. To open the file which contains the contents section, click on the CONTENTS bookmark. If you

click on CONTENTS and see a title page, you have opened a file which contains both the contents section and the title page. When this occurs, page down to the contents section or click the CONTENTS bookmark again.

Bookmarks, Hypertext and Reader Navigation Buttons

Bookmarks

Bookmarks are clickable links which appear in a separate and expandable column to the left of each document file. The MERL CD-ROM features three special bookmarks:

- **CONTENTS** opens file which contains the Contents section
- **LIST OF BOOKS** opens navigational file for related documentation suite
- **HOME/HELP** opens MERL home page

All other bookmarks correspond to section headings which appear in the document. When you click on these bookmarks, the file which contains that section heading opens.

Hypertext

Hypertext is a text area that can be clicked to access related files, sections, tables or graphics. In every section except the Contents section, hypertext is indicated by *red, underlined* text. In the Contents section, all text is hypertext.

Reader Navigation Buttons

Acrobat Reader provides six navigation buttons on its toolbar. While each tool can be used with a simple mouse click, they can also be used by selecting commands under Reader's "View" pull-down menu.
